DETAILED ACTION

Drawings

1. Figures 7-9 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
2. The drawings filed on 10/15/2001 are acceptable subject to correction of the informalities indicated above. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
4. Claims 1-20 are allowed.

Art Unit: 2624

5. The following is an examiner's statement of reasons for allowance:

The present invention provides a new method, system, and computer product for image encoding, which can transmit the important portion, such as a person's view, of a display screen in a high level of preciseness even when there is no motion in the entire input image (see specification, page 5, lines 18-22).

In particular, the new method, system and computer product comprise the following features, which the prior art, either taken singly or in combination, does not teach:

- calculating a first weighting coefficient of the one or more groups in a case where the plurality of blocks are classified according to the motion vector based grouping, and calculating a second weighting coefficient of the one or more groups in a case where the plurality of blocks are classified according to the DC component based grouping (see independent claims 1 and 20);

- a weighting section which calculates a quantization step width for use in quantizing resultant data of the discrete cosine transformation performed by said orthogonal transformation circuit, based on the motion vector detected by said motion prediction circuit and the DC components of brightness and color information of each of the plurality of blocks calculated by said orthogonal transformation circuit (see independent claim 10).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
